Max	15.0%	10.8%	26.0%	20.2%	5.4%	36.6%	16.2%

**Technical Notes:**

- <sup>1</sup> Percentage of Missing Deaths means the percentage of deaths that cannot be included in reported rates on subsequent tables. These are records where both gestational age and birthweight are missing. This includes the percentage infant death certificates that could not be linked to birth certificates at the city/county level. Some of these records are for infant and fetal deaths less than 500 grams or 24 weeks gestational age and would not have been reported in rates on subsequent tables, and therefore, rates cannot necessarily be inflated by these percentages.
- <sup>2</sup> Percentage of Imputed Deaths means the percentage of deaths where birthweight or gestational age was missing and a new value was estimated based on the known birthweight or gestational age. The percentage estimates the potential bias of this procedure on the overall rate. For infant deaths, gestational ages < 31 weeks are treated as birthweight < 1,500 grams, and gestational ages < 22 weeks are treated as birthweight < 500 grams. For fetal deaths, gestational ages < 32 weeks are treated as birthweight < 1,500 grams, and gestational ages < 24 weeks are treated as birthweight < 500 grams.
