Parts of a Procedure Activity

Objective addressed: Laboratory Procedure Format #4

Part 1
You have been given one section of a laboratory procedure. Read your section and identify in which (one) of the 18 sections your section belongs. The 18 section headers have been placed around the room. Once you have identified your section, go stand with the appropriate header. There may be others standing with your header (from different procedures). Compare your sections. What is similar about them? What differences do you observe? Do you think everyone standing with your header is in the correct section?

Part 2
Now that you know what section of the procedure you have, find the classmates that have the remaining sections of your laboratory procedure. Arrange yourselves in the order in which your sections would appear in the procedure. Remember! Not every procedure will contain all 18 sections.
